

The Ricci flow on surfaces as an introduction to geometric flows

SPEAKER: VOLKER BRANDING,

Vienna University of Technology, Department of Mathematics

Date and Place: March 13, 2014, University of Vienna

ABSTRACT

In the first part of the talk we will give an introduction to geometric flows, no prior knowledge on this topic will be required. The second part of the talk will give an introduction to the Ricci Flow on closed surfaces. Finally, we will discuss how one can prove the existence of metrics with constant curvature on closed surfaces by using the Ricci flow.
